Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                             ANUI2172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to coluit bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, coluppeptides, and to detect the presence of mammalian lung, colon, coluppeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour coluppeptide expression in cerosis factor-alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the prolliferation or gene expression in pericyte cells, the release of proteoglycans from cartilage, the columpers of inner ear utricular supporting cells or of T-columpeptides in the proliferation of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO colypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor columps. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The problem and properties problems and in assays to identify molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360

The invention relates to a diagnostic composition containing at least one of 23 mucleotide sequences (I, ABLS8901-ABLS8950) with altered expression associated with tumours. (I), including antisense sequences and ribozymes, also proteins (II, ABB7424-ABB7745) encoded by them and antibodies specific for (II), are useful for diagnosis, monitoring and transment of tumours, especially cutaneous T cell lymphoma (TCTL). (II) and antibodies to (II) are useful for vaccination. (II) can also be used to prepare pre-loaded antigen-presenting cells or tumour-specific T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an isolated nucleic acid (I) comprising, or which has 80 % sequence identity to, or the full-length coding sequence of, one of 275 nucleotide sequences, and which encodes a corresponding color of 275 nucleotide sequences, and which encodes a corresponding color polypeptide selected from 275 amino acid sequences, where all sequences are given in the specification. The polypeptide encoded by (I) is used to cere the Optivity of a cell styressing a CRO polypeptide, modulate a biological activity of a cell styressing a CRO polypeptide, modulate a biological activity of a cell, stimulate the release of tumour necrosis factor (TNF)-alpha from human blood, modulate the proliferation or differentiation of cells or gene expression, che uptake of glucose or free fatty acid by cells, stimulate the release of cytokine stimulate the release of proteoglycans, stimulate the release of cytokine comparipheral blood emonouclear cells, inhibit the binding of A-peptide to factor VIIA, or detect the presence of tumour in a mammal. The nucleic acid and polypeptide encoded by it, are useful for treating inflammatory confiscases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome confiscations. The nucleic acid is useful as hybridiation probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful in tissue typing. This is the anno acid sequence of a novel human secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The present invention relates to the isolation of novel human PRO polypeptides, and the polymucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polymuclocides are useful for preparing a medicament useful in the treatment of diabetes, bone and/or cartilage disorders (e.g. rheumatoid arthritis, sports injuries, osteoarthritis), obesity, hyper- or hypo-insulinaemia, hearing loss, and coagulation disorders (e.g. stroke, heart attack). Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABUS0870-ABUS1144 represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequata.uspto.gov/psipsDEDEntry.html
                                                                                                                                                                                                                                                                                                                                                                                        New isolated PRO polypeptide useful for treating diabetes, rheumatoid arthritis, sports injuries, obesity, hearing loss in mammals, stroke, heart attack.
                                                                                                                                                                                                                                                     Gao
                                                                                                                                                                                                                                                                  s;

Claim 12; Fig 46; 660pp; English.

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane process. The PRO polypeptides are secreted and transmembrane process. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, and for linking constitutions of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TNP)-alpha from thuman blood, for stimulating the proliferation of differentiation of chondrocytes, and detecting the prosence of tumours. The polynucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generic analysis of individuals with genetic disorders, and in gene therapy. ABU66570-ABU6684 represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequence and processed the patent was obtained in electronic format directly from the USPTO web site

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

# Claim 12; Fig 46; 659pp; English

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in linking a bioactive molecule to a cell expressing a PRO polypeptide, and

ठे g

```
The invention relates to an isolated nucleic acid comprising at least 80% sequence identity to a PRO (secreted and transmembrane protein) cDNA comprising a nucleic acid (a) encoding a PRO polypeptide, or its extracellular domain (with or without its associated signal peptide),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 12; Fig 46; 659pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Baker KP, Beresini M,

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 nucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited under American Type Culture Collection (ATCC) accession number in a list given in the specification. Also included are vectors and host calls for producing PRO proteins, PRO fusion proteins, anti-PRO antibodies, PRO extracellular domains and mature sequences, methods of detecting PRO proteins, methods for stimulating the release of TMF-alpha (tumour necrosis factor alpha) from human blood, (and the proliferation of Chondrocyte cells, the proliferation of of chondrocyte cells, the proliferation of chondrocyte cells, the release or proteoglycans from expression in pericyte cells, the release or proteoglycans from peripheral blood mononuclear cells, the release of a cytokine from peripheral blood mononuclear cells, the release of a cytokine from peripheral blood mononuclear cells, the release of a cytokine from peripheral blood mononuclear cells, an eathod for inhibiting the brinding of A-peptide to factor VIIA, or the differentiation of adjocotte cells, a method for detecting the presence of a tumour in a mammal and an oligonucleotide probe derived from any of the nucleid sequences cited above. The nucleic acide and polypeptides are useful for treating and polypeptides are useful for treating and polypeptides are useful for treating and endother concerned in the polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both cuseful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both cuseful as pharmaceuticals, diagnostics, biosensors or bioreactors. Claim 12; Fig 46; 659pp; English.

                                                                               8
                                                                                                              transmembrane) polypeptides (1): (1) is useful for stimulating the cransmembrane) polypeptides (1): (1) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of release of TNF-alpha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adjocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of release of profeoglycans from cartilage, for stimulating the proliferation of In-1ymphocyte cells, for stimulating of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the binding of cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, cretal, cervical or liver tumour. The oligonucleotide probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (1) is also useful as therapeutic agent. PRO is useful in chromosome in assays to identify other proteins or molecules involved in binding in craction. A polymucleotide (II) encoding (I) is useful in the craction. A polymucleotide (II) encoding (I) is useful in the craction of PRO polypeptide, for generating reagents and gene mapping, in generation of antisense NA and DNA, in the creceming of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating crobes. An anti-(I)-antibody is useful in diagnostic assays for PRO, encomposed. An anti-(I)-antibody is useful in diagnostic assays for PRO, encomposed. In an (II) are useful for tissues or serum, and for generating concession in specific cells, tissues or serum, and for colling the sequence of a novel human secreted and transmembrane PRO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for atimulating the release of tumour necrosis a factor-alpha (TNF-alpha) from human blood, a method for atimulating the prosence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prosetate, rectal, kidney, cervical and liver tumours). The prolynucleotides are useful in molecular biology, in generating a colon, breast, prosence and gene mapping, in generating a trissense RNA and BNA and in gene therapy. The polynucleotides may also a trissense RNA and BNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful at uncore. The properties of antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing a condition of screening and inhibiting proliferation of uncore or PRA by skeletal muscle cells, for adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating the uptake of stimulating differentiation of adipocyte cells, for stimulating the proliferation of inner ear utricular supporting cells or T-lymphody are useful for treating such as sports injuries and arthritis. PRO polypeptides which stimulates and arthritis. PRO polypeptides are also useful for treating sporte-related joint problems arthritis. PRO polypeptides are also useful for treating sportes represente a human PRO polypeptide of the invention. This New isolated nucleic acid encoding a secreted and transmembrane polypeptide, designated e.g. PRO1114 or PRO4978, useful in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. Claim 12; Fig 46; 659pp; English

                                                                                       ઠે
                                                                                                                      요
                                                                                                                                                                                                                                                transmembrance polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TWR-alpha) from human blood, a method for stimulating the release of tumour necrosis of electing the presence of a tumour in a mammal (e.g. humg, colon, breast, prostate, rectal, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in correspondence and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for modulating the uptake of glucose or FRA by adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of finner ear untifoular capturing cells, for stimulating the proliferation of finner ear untifoular capturing cells, for stimulating the release of grotosylvans from the inhibiting the differentiation of adipocyte cells and for stimulating the proliferation of an expression in this proliferation of adipocyte cells and for stimulating the proliferation of an expense of protosylvans in the proliferation of an entrapeants a number of the proliferation of an entrapeants and the proliferation of an entrapeants a number of an expense of protosylvans from the proliferation of entherner and the proliferation of entherner and the proliferation of entherners and the prol

```
The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the cransmembrane) polypeptides (1). (1) is useful for stimulating the profile from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of propeoglycans from cartilage, for stimulating the proliferation of inner ar utricular supporting cells, cor stimulating the proliferation of inner ar utricular supporting cells, cor stimulating the proliferation of for 1 ymphocyte cells, for stimulating the proliferation of read of a cytokine from PBMC cells, for inhibiting the binding of the release of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleotide probes are useful for isolating genomic and CDNA nucleotide sequences or antisense probes. (1) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. A polynucleotide (II) encoding (I) is useful in chromosome correcting of the preparation of PRO polypeptide, for generating transgenic animals which in turn are useful in the development and correcting its expression in specific cells, tissues or serum.

Correcting its expression in specific cells, tissues or serum.

Correcting its expression in specific cells, tissues or serum.

Correcting its expression in specific cells, tissues or serum.

Correcting its expression in specific cells, tissues or serum.

Correcting its expression in specific cells, tissues or serum.

Correcting its expression in specific cells, tissues or serum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 XNKGFSVASTVQSHTKGIWIWCVPHPNWPNHTLVLLDTEGLGDVEKADNKNDIQIFALAL 120

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the crossis to polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a memmal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as plymucleotides are useful in molecular biology, including uses as plymucleotides are useful in molecular biology, including uses as colon, breast morphy and in gene therapy. The polymucleotides may also artisonse RNA and DNA and in gene therapy. The polymucleotides may also bused in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of stimulating or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating coliferation of inner ear uricular supporting cells or T-lymphocyte cells, for inducing endothelial cells for adipocyte cells, for stimulating cells for inducing endothelial cell tube formation and for treating coles or structular cartilage are useful for treating sports release of proteoglycans from cartilage are useful for treating sports injuries and conditions are also useful for treating sports-cells, or reating sports injuries and carticular cartilage are useful for treating sports release of proteoglycans may benefi
liver; microvascular endothelial cell; glucose; FFA; skeletal muscle cell; adipocyte cell; pericyte cell; inner ear utricular supporting cell; T-lymphocyte cell; endothelial cell tube formation; bone disorder; cartilage disorder; sports injury; proteoglycan; articular cartilage defect; osteoarchritis; rheumatoid arthritis; haemoglobin-associated disorder thalassaemia; immune system cell infiltration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New PRO nucleic acid, useful for preparing a composition for treating e.g., tumor or for tissue typing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   s;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of a novel human guanylate binding protein (guanylate binding protein-4 or GBP-4), and the bolding protein guanylate binding protein-4 or GBP-4), and the objuncleotide sequence encoding it. The polynucleotide sequence encoding GBP-4, the GBP-4 polypeptide, and antibodies to GBP-4 are useful in treating myelodysplactic disorders, myeloproliferative syndromes, acute myeloid leukaemia and cancers (e.g. gastric, lung or colon cancers or melanoma). The polynucleotide sequence is useful as hybridisation probes, in chromosome and gene mapping, in generating transgenic animals, in radioimmunoassays, in inducing formation of anti-GBP-4 antibodies, in combating immunological and inflammatory responses and other pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                300

-1 FUNCTION: Blinds GTP, GDP and GMP.
-1 INDUCTION: By interferon gamma during macrophage activation.
-1 SIMILARITY: Belongs to the GBP family.
                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=91342675; PubMed=1715024; Cheng Y.-S.B., Patterson C.E., Staeheli P.; Cheng Y.-S.B., Patterson C.E., Staeheli P.; Interferon-induced guanylate-binding proteins lack an N(T)KXD consensus motif and bind GMP in addition to GDP and GTP."; Mol. Cell. Biol. 11:4717-4725(1991).

Interferon-induced guanylate-binding protein 1 (GrP-binding protein 1)
(Guanine nucleotide-binding protein 1) (mGBP1) (mGBP-1) (Interferon-gamma inducible protein MAG-1).
Name-Edbp1, Synonyma-Edp-1, Mag-1, Mpa1;
Mus musculus (Mouse).
Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutherla; Rodentia; Sciurognathi; Muridae; Musinae; Mus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Stickney J.T., Buss J.E.;

"Murine guanylate-binding protein: incomplete geranylgeranyl isoprenoid modification of an interferon-gamma-inducible guanosine triphosphate-binding procein.";

Mol. Biol. Cell 11:2191-2200(2040).

-I- FUNCTION: Binds GTP, GDP and GMP.
-I- INDUCTION: By interferon gamma during macrophage activation.
-I- PTM: Prenylation of mouse GBP1 is incomplete. It persistently exists in the cell as a mixture of C20-modified and (more predominantly) nonmodified form.
-I- SIMILARITY: Belongs to the GBP family:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=92091752; PubMed=1753106; Wynn T.A., Nicolet C.M., Paulnock D.M.; Midentification and characterization of a new gene family induced during macrophage activation."; J. Immunol. 147:4384-4392(1991).
